OKI LPR*

OKI LPR is a utility used to connect computers to the B6200, B6300 and B6500 over a TCP/IP network. It includes many useful features that enable users to:

- Monitor the status of print jobs
- Download PS and PRN files directly to a printer
- View the printer status
- Automatically redirect jobs to other printers on the network

Productivity Utilities – Get the most out of your printer

PDF Print Direct*

This utility allows PDF files to be sent directly to the printer without having to open the actual application, saving the user time. To use PDF Print Direct, the OKI Printing Solutions driver needs to be installed and the printer requires a Hard Disk Drive (HDD) or Compact Flash for optimum performance.

Secure Print*

A useful feature when a confidential document has to be printed on a shared network printer. A Personal Identification Number (PIN) can be assigned to each print job sent to the printer. The user then enters the PIN number into the printer's operator panel to print the document. To use the Secure Print feature, the printer must have an internal HDD installed.

Ask OKI*

Ask OKI, help is close at hand delivering advice, hints and tips on how users can optimise the use of the B6000 Series mono printers. The Ask OKI tab in the printer driver connects users to a website specifically tailored to the B6200, B6300 and B6500 printers. This gives simple, step by step instructions for optimal printing.

Storage Device Manager*

Storage Device Manager is a program used for managing files on the hard drive or flash memory of PCL/PostScript printers like the B6200, B6300 and B6500. It is particularly useful for managing printer fonts and macros and can also be used to store print jobs and demo files directly on the printer e.g. brochures, forms or templates.

Template Manager 2006*

This powerful software program makes life easier in the office by providing ready-made templates for many kinds of stationery and promotional materials such as labels and business cards. The unique editing suite allows the freedom to create new templates for specific media or vertical industry specific documents and to make it even easier the software automatically matches the document with the correct media. These templates can also be shared across networks for design/brand consistency.

Cost Control Utilities - Manage your costs

Print Control***

Print Control is a job accounting and reporting program which enables network administrators to track printer usage and control costs. This easy to use utility captures details such as number of printouts, the paper type and size and the consumables used. Printer access can be restricted to authorised individuals or groups, and pre-defined cost limits can be set, denying further access once these print limits have been reached.
