

Anoto penPresenter

The easy way to share ideas and encourage collaboration

In most presentations, the information flows just one way - from the presenter to the audience. Genuine two-way communication and collaboration can be difficult. But it doesn't have to be. The answer lies in a winning combination of superior OKI print quality coupled with Anoto Digital Pens. It means you can add handwritten notes directly to your PowerPoint® presentation, even while it's being projected! What's more, everything you write is captured and stored as a digital file, giving you a full and accurate record of the meeting.

Work the way you want to

Simply print your presentation on ordinary paper taken from your OKI printer and use an Anoto Digital Pen to add extra handwritten information whenever you want, and for navigating from slide to slide. Notes, drawings, highlights: they can all be added in real time, making it easy to develop ideas and respond to questions as they arise. Imagine the possibilities:

- Capture ideas from planning and brainstorming meetings by giving participants the ability to add their own thoughts to a shared presentation.
- Print blank PowerPoint slides on your OKI printer to write on as a convenient, 'use anywhere' alternative to an interactive whiteboard.
- Eliminate the chore of taking and transcribing notes. Anoto penPresenter automatically records and stores everything in a digital file.
- Jump instantly to any slide at any time - just by pointing your pen - to tailor your presentation to the exact interests of the audience.
- Enjoy the convenience of features such as 'ink' colour, line thickness, an eraser, a highlighter, and a pointer, plus easy navigation features and more.

With Anoto penPresenter you can add handwritten notes directly to your PowerPoint presentation, even while it's being projected!

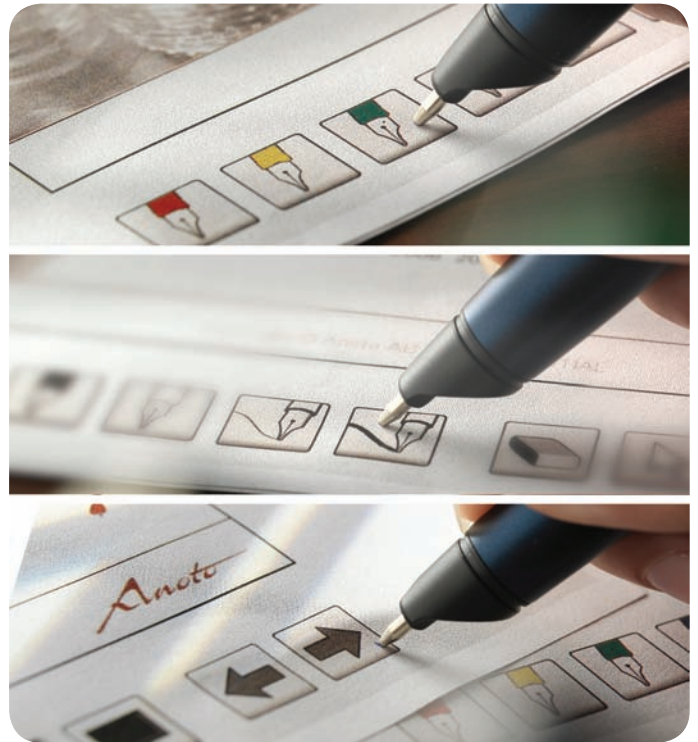

Real pen. Real paper

The Anoto technology adds a barely visible, unique dot pattern to the paper copy of your presentation when you print it on an OKI printer. This is what you write on. The pen, which looks and feels like a regular ballpoint, contains a tiny digital camera that takes 75 snapshots every second as you write with it.

Every snapshot contains enough data to determine the exact position of the pen (and therefore what you have written or drawn) and the identity of the slide that you have written on. A control bar, which is added to the bottom of each page, lets you choose the ink colour and line size and gives you a selection of other handy tools for annotating and controlling your presentation.

Each presentation can contain up to 200 PowerPoint slides, including blank slides that you can use as an alternative to an interactive whiteboard. When you've finished, Anoto penPresenter gives you a digital copy of your finished presentation, complete with your handwritten notes.

Choosing the OKI printer that's right for you

Our long standing business relationship with Anoto, and global range of Anoto qualified printers, is a testament to the quality of our output. From A4 to A3, from highly affordable to impressively powerful, there's an Anoto-qualified OKI printer to suit every application. And we're adding more to the range all the time. Choose from:

OKI C5950

A fast, affordable 26ppm A4 colour printer with exceptional ease of use

OKI C710

A 30ppm A4 colour printer with the perfect combination of performance flexibility and control

OKI C830

A highly compact, versatile A3 colour printer capable of up to 30ppm

OKI C9650

A high volume, 36ppm A3 colour printer for professional quality output
