

Unlock printing power and maintain business control

OKI Printing Solutions not only provides state of the art printers that are simple to operate, but also makes it easy for users to get the most out of them. The Utility Suite is a package of advanced software that comes with every printer and MFP, and is the key that can unlock extra printing power and business control.

The C8000 Series Utility Suite is OKI Printing Solutions' own unique set of software designed to help users get the most out of their C8600 and C8800 A3 colour printers.

High Definition Color – Technology without equal. Printing without effort

It's easy to achieve outstanding results with High Definition Color – a unique collection of market defining hardware and software technologies. Together, these components deliver unsurpassed colour printing... simply, intelligently, perfectly. As the specialists in business printing solutions and leaders in colour printing, we can be trusted to deliver. Great colour starts with OKI Printing Solutions.

Productivity Utilities – Get the most out of your printer

Template Manager 2006*

This powerful software program makes life easier in the office by providing ready-made templates for many kinds of stationery and promotional materials such as labels, business cards, banners and CD/DVD labelling. The unique editing suite allows the freedom to create new templates for specific media or vertical industry specific documents and to make it even easier the software automatically matches the document with the correct media. These templates can also be shared across networks for design/brand consistency. And, with Ask OKI, help is close at hand delivering advice, hints and tips on how users can optimise the use of the C8600 and C8800 A3 colour printers.

WebPrint*

This piece of software eliminates the frustration of web pages being cut-off when they are printed out. It solves many common problems of internet printing, thanks to special features such as automatic scaling, 'select area' printing, automatic page set-up and print preview. It is compatible with all our current colour and mono page printers and is designed to ensure that users ultimately save time, money and paper.

Photo Enhance***

Photo Enhance adjusts the tonal quality of images, making them appear brighter and more vibrant. This allows users to achieve clear, sharp, photo-like quality pictures even on ordinary office paper. This unique OKI Printing Solutions' feature is selectable within the printer driver and will enable any business to enjoy truly professional in-house printing.

Storage Device Manager**

Storage Device Manager is a program used for managing files on the hard drive or flash memory of PCL/PostScript printers like the C8800. It is particularly useful for managing printer fonts and macros and can also be used to store print jobs and demo files directly on the printer e.g. brochures, forms or templates.

Printer Management Utilities – Manage your printer over the network

PrintSuperVision*

This system allows IT support staff to monitor all business printers within the firewall, regardless of printer make. Access is given to networked printer data for monitoring, reporting and managing networked printers. The user interface to this system is web browser based, making it simple to use.

Web Driver Installer*

Web Driver Installer allows network administrators to install a printer driver across a whole network in one go, making installation quick and easy. It is a server-based application that also detects new printers being connected to the network and sends an automatic e-mail prompt to users to download the new driver.

Network Extension*

Network Extension is used to view the printer configuration via the properties tab in the printer driver and automatically configures the printer driver with the correct hardware options e.g. duplex or second paper tray.

OKI LPR*

OKI LPR is a utility used to connect computers to the C8600 and C8800 over a TCP/IP network. It includes many useful features that enable users to:

- Monitor the status of print jobs
- Download PS and PRN files directly to a printer
- View the printer status
- Automatically redirect jobs to other printers on the network

AdminManager

AdminManager is used for configuring and managing printer network card settings. It can assign IP addresses and configure settings for TCP/IP, Netware, Ethertalk, NetBEUI, E-mail and more, making it easy to manage OKI Printing Solutions network printers, such as the C8000 Series, from one place.

Colour Management Utilities – Control your colour output

Color Correct*

With the Office Palette Tuning function for the C8000 Series you can adjust the standard palette colours in Microsoft Office programs. The Hue & Saturation Tuning function allows you to change the overall appearance of a print by adjusting gamma, hue and saturation.

Color Swatch

OKI Printing Solutions Color Swatch is used to emulate a specific printed colour. When using the C8600 or C8800, businesses will benefit from precision colour printing particularly when printing corporate colours, such as those used for company logos.

Cost Control Utilities – Manage your costs

Print Control ****

Print Control is a job accounting and reporting program which enables network administrators to track printer usage and control costs. This easy to use utility captures details such as number of printouts, whether colour or mono, the paper type

and size and the consumables used. Printer access can be restricted to authorised individuals or groups, and pre-defined cost limits can be set, denying further access once these print limits have been reached.

Set-Up Utilities – Get your printer up & running quickly & easily

Printer Driver

The Printer Driver is a program that controls printing and sets options such as print quality and paper size for your printer. The C8600 supports Windows and Mac Host based printing while the C8800 supports PCL and PostScript.

Document security

The C8800 is supplied with a series of tools to help protect and secure confidential documents. Data can be encrypted within the driver to prevent files being reprinted by others and a PIN code can be applied to a print job to ensure only those with access can print. In addition, the secure erase function protects documents from being recovered and re-printed from the internal hard disk.

* Utility available with Microsoft Windows only

** Utility available with Microsoft Windows only. Only available with C8800

*** Not included in Windows/Mac PostScript drivers
